

Heatmap showing the genetic differentiation (F_{ST}) between 10 populations. The color scale ranges from -6 (dark blue) to 6 (dark red), with 0 being white. The populations are labeled on both the top and left axes: Choisy, Rouies, Rocher de la Selle, La Meije, Occidentale Ailefroide, Plat de la Selle, Rateau, Olan, Sirac, Lauvitel, and Muraillette. The dendrogram on the left shows a hierarchical clustering of the populations, while the dendrogram on the top shows the clustering of the columns. The heatmap reveals several clusters of populations with low differentiation (yellow/white) and some pairs with high differentiation (orange/red).
